

# BRITTVIDEO

## Master Developer Build Specification

Complete A-Z Product Requirements, Architecture, Workflow, Security, Recovery, Testing and Launch Plan

**Purpose: This document is intended to be handed directly to a software developer or development team as the controlling product specification for building the complete BrittVideo application.**

|                       |                                                                |

CONFIDENTIAL PRODUCT / DEVELOPMENT SPECIFICATION

# Executive Summary

BrittVideo is a one-owner video marketing business application designed to take a prospect from demonstration and sale through video creation, human approval, AI-assisted production, delivery, follow-up and repeat business. The software must reduce technical burden on the owner, preserve customer work automatically, support secure payments and role-based access, and remain independent of any single AI video platform.

- Mac is the primary production and administrative workstation.
- iPad is primarily for prospect demos, sales, signup and secure payment.
- Cloud/central data connects and protects authoritative business records; sync is not backup.
- Standard default price is \$597; Premium default price is \$997. Owner may override an individual deal without rewriting historical sales.
- Standard includes Website Video up to 120 seconds, social formats 16:9, 9:16 and 1:1, plus a separate Email Video.
- Quick Videos support 15, 30, 60, 90 and 120 seconds and multiple purposes.
- Human approval is mandatory; a Complete Video Kit gate must be calculated from valid underlying approvals.
- AI video production must use a provider-independent production layer with adapters so supported platforms can be switched without rebuilding BrittVideo.
- Every administrative person has a separate login. Roles: Super User, Admin and User. The developer must never share the owner's login.
- Support & Recovery is non-negotiable: autosave, checkpoints, crash recovery, safe retry, duplicate protection, system health, plain-language support reports and Get Support / Send for Support.
- Standard customers remain active relationships after delivery; marketing opt-out must be easy and automatically enforced.

**Developer acceptance standard: the application is not complete merely because code runs. It is complete when the defined owner workflows pass the acceptance tests and the owner can run BrittVideo without becoming the software technician.**

## Status Legend

| Status                   | Meaning                                                                |
|--------------------------|------------------------------------------------------------------------|
| BUILT & VERIFIED         | Successfully tested end-to-end.                                        |
| BUILT - NEEDS TESTING    | Function exists but complete workflow is not yet proven.               |
| BUILT - NEEDS CORRECTION | Testing exposed a defect or usability problem.                         |
| NOT BUILT YET            | Required but not implemented.                                          |
| FUTURE STAGE             | Intentionally deferred; not a blocker for the applicable launch stage. |

## Table of Contents / Section Map

| Section | Subject                         |
|---------|---------------------------------|
| A-K     | Core Builder and business audit |
| L       | Command Center                  |

| Section | Subject                                         |
|---------|-------------------------------------------------|
| M       | Sales, Orders, Pricing & Payments               |
| N       | Delivery, Video Library & Customer Handoff      |
| O       | Follow-Up, Marketing & Repeat Business          |
| P       | Premium Quarterly System                        |
| Q       | Support, Recovery, Backup & System Health       |
| R       | Cloud, Central Data & Mac/iPad Architecture     |
| S       | Integrations & External Services                |
| T       | Image Library, Storage & Cleanup                |
| U       | AI Provider Independence & Production Switching |
| V       | Security, Privacy & Owner Controls              |
| W       | Testing, Quality Control & Launch Gates         |
| X       | Launch Stages & Build Priority                  |
| Y       | Developer Build Specification & Handoff         |

## Sections A-K - Core Builder & Business Audit

These sections summarize the existing Builder foundation and the requirements already established before the later A-Z architecture work.

### A1 - One Current BrittVideo

The owner experience must ultimately be one current BrittVideo application, not a collection of versioned HTML files. Development builds may exist separately.

**REQUIRED**

### A2 - Mac Primary

Mac is the primary production/admin workstation.

**LOCKED**

### A3 - iPad Focus

iPad is Demo + Sales + Signup + Payment. Full production parity is not required.

**LOCKED**

### B1 - Demo Mode

Prospect-safe Demo Mode is required and must hide private/admin information.

NOT BUILT YET

### B2 - Demo Industries

Primary demo categories are Senior Care, Dental, Attorneys and Other.

**LOCKED**

### B3 - Other

Other must preserve the actual business type, such as Plumbing, HVAC, Real Estate or Restaurant.

**LOCKED**

### C1 - Become a Client

Demo flows require an obvious Become a Client path.

NOT BUILT YET

### C2 - Package Defaults

Standard \$597 and Premium \$997 are current default/list prices. Owner controls pricing.

**LOCKED**

### C3 - AI Pricing Authority

AI may not independently invent, discount or commit a customer price.

**LOCKED**

### D1 - Short Signup

Capture only needed business/contact/website/package/agreement/payment information. Do not re-ask information already known from the website or prospect record.

**REQUIRED**

## **E1 - Remote Sales**

Mac + Zoom uses prospect-safe Demo Mode and window sharing.

**REQUIRED**

## **F1 - Remote Payment**

Use secure Square payment link; never ask a prospect to read card details over Zoom.

**REQUIRED**

## **G1 - Demo Link**

Owner-controlled prospect-safe Demo Link is required; it may eventually lead to purchase.

**REQUIRED**

## **H1 - Demo Library**

One approved Demo Library feeds iPad, Mac Demo Mode and Demo Links.

**REQUIRED**

## **I1 - iPad-to-Mac Handoff**

A successful iPad sale creates central Client, Order and Project records and appears on Mac as New Client - Ready to Start.

**REQUIRED**

## **J1 - Sales Triangle**

In-person = iPad; remote = Mac + Zoom; asynchronous = Demo Link. All converge on the same central sales system.

**LOCKED**

## **K1 - Builder Workflow**

Select Prospect/Client -> Analyze Website -> Review Images -> Choose Story -> Build Videos -> Review Scenes -> Approve -> Download/Deliver.

SUBSTANTIALLY BUILT - NEEDS TESTING

## **K2 - Returning Clients**

Reuse one durable client record; avoid duplicate client creation.

**REQUIRED**

## **K3 - Website Analysis**

Gather useful public website content and images, but owner review remains required.

BUILT - NEEDS TESTING

## **K4 - Image Controls**

Image states include available/approved/Do Not Use. Delete, bulk delete and in-use protection still require implementation.

PARTIAL

## **K5 - Story Authority**

AI may suggest a story; owner retains final authority.

**LOCKED**

## **K6 - Scripts & Narration**

Scripts/narration support review and approval. Recent testing reached all scripts/narration approved.

BUILT - NEEDS FINAL TESTING

## **K7 - Scene Approval**

Scene review/approval must be persistent and reflected in the approval ledger.

BUILT - NEEDS FINAL TESTING

## **K8 - Approval Counter**

Visible counts must always agree with the underlying approval state.

BUILT - NEEDS FINAL TESTING

## **K9 - Complete Video Kit**

Complete Video Kit Approved is a real gate only when all required valid approvals exist.

CRITICAL

## **K10 - Material Change**

A material edit to approved content must invalidate the affected approval.

**NOT BUILT/NOT VERIFIED**

## **K11 - Save/Restore**

Save/restore foundation exists, including Quick Video save/restore work, but automatic protection is still required.

PARTIAL

## **K12 - Quick Videos**

Standalone Quick Videos support purposes such as Thank You, Follow-Up, Review Request, Referral Request, Email, Promotion, Announcement and Seasonal.

**REQUIRED**

## **K13 - Quick Video Durations**

15, 30, 60, 90 and 120 seconds.

**LOCKED**

## **K14 - Standard Deliverables**

Website up to 120 sec; social landscape 16:9, vertical 9:16, square 1:1; separate Email Video.

**LOCKED**

## **K15 - Email Standalone**

Email Video can also be created by itself.

**LOCKED**

## **K16 - Production Lifecycle**

Track ready/submitted/processing/review/approved/delivered states.

**REQUIRED**

## **K17 - Download/Delivery**

Downloads have been partially tested; full delivery workflow remains required.

PARTIAL

## **K18 - Post-Delivery Relationship**

Standard customers remain active relationships after delivery.

**LOCKED**

## **K19 - Support & Recovery**

The owner must never be expected to diagnose software failures.

ABSOLUTE NON-NEGOTIABLE

## Section L - Command Center

### L1 - Command Center Home

Create the owner home screen for daily operation.

NOT BUILT YET

### L2 - Confidence Status

Show Work Saved & Protected and Systems Normal when true.

**REQUIRED**

### L3 - Needs Attention Today

Show actionable counts/problems, not technical noise.

**REQUIRED**

### L4 - Exact Navigation

Clicking an item goes to the exact work needing attention.

**REQUIRED**

### L5 - Continue Working

Return to meaningful unfinished work after closing/reopening.

**REQUIRED**

### L6 - Sales Area

Show prospects/new clients/sales actions.

**REQUIRED**

### L7 - Production Area

Show project and approval states.

**REQUIRED**

### L8 - Completion

Use meaningful milestone-based completion, not a misleading raw count.

**REQUIRED**

### L9 - Delivery Queue

Show what is ready or blocked for delivery.

**REQUIRED**

### L10 - Follow-Up

Show appropriate post-delivery relationship work.

**REQUIRED**

## **L11 - Premium**

Show upcoming quarterly obligations before they are late.

**REQUIRED**

## **L12 - Quick Video**

Provide a clear Quick Video shortcut/status area.

**REQUIRED**

## **L13 - Format Visibility**

Show 16:9, 9:16, 1:1 and Email states clearly.

**REQUIRED**

## **L14 - Payments**

Show only actionable payment status/issues.

**REQUIRED**

## **L15 - Revenue Snapshot**

Simple owner snapshot; BrittVideo is not accounting software.

**REQUIRED**

## **L16 - Storage**

Show storage health/cleanup when action is useful.

**REQUIRED**

## **L17 - System Health**

Surface recovered automatically / needs attention / support needed.

**REQUIRED**

## **L18 - Search and Create**

Provide search and +Create controls.

**REQUIRED**

## **L19 - Mac First**

Command Center is optimized for Mac primary operation.

**LOCKED**

## **L20 - Usability Test**

Owner should understand the Command Center within seconds.

ACCEPTANCE TEST

## Section M - Sales, Orders, Pricing & Payments

### M1 - One Sales System

All sales channels create the same central client/order/project records.

**REQUIRED**

### M2 - Package Defaults

Standard \$597; Premium \$997.

**LOCKED**

### M3 - Owner Price Override

Owner may override an individual deal without changing global defaults.

**REQUIRED**

### M4 - Historical Pricing

Preserve List Price at Sale, Quoted/Agreed Price and Actual Sold Price.

**REQUIRED**

### M5 - Revenue

Revenue uses actual sold amount.

**REQUIRED**

### M6 - Override Reason

Optional reason for a deal-specific price override.

**REQUIRED**

### M7 - Settings Pricing

Future default pricing changes are owner-controlled.

**REQUIRED**

### M8 - Quick Video Pricing

No locked Quick Video price; owner enters agreed price.

**REQUIRED**

### M9 - Signup

Short signup with business/contact/email/phone if useful/website/package/price/agreement/payment.

**REQUIRED**

### M10 - Agreement

Agreement/acceptance must match the purchased package and preserve evidence.

**REQUIRED**

## **M11 - Square**

Secure payment processing; BrittVideo stores only necessary payment references/status.

**REQUIRED**

## **M12 - In-Person Payment**

Secure iPad payment flow.

**REQUIRED**

## **M13 - Remote Payment**

Secure payment link for Zoom/remote sale.

**REQUIRED**

## **M14 - Payment Status**

Track pending/paid/failed/refunded or equivalent states.

**REQUIRED**

## **M15 - Duplicate Payment Protection**

Retries must never create duplicate charges.

**REQUIRED**

## **M16 - Sale Activation**

Successful sale creates Client, Order, Package, prices, Payment Status and Project.

**REQUIRED**

## **M17 - Welcome**

Show Welcome to BrittVideo after successful signup/payment.

**REQUIRED**

## **M18 - Returning Client Purchase**

Existing clients can purchase additional work without duplicate client records.

**REQUIRED**

## **M19 - Premium Included Work**

Quarterly included Premium work is not a new sale.

**REQUIRED**

## **M20 - Manual Sale**

Phone/email/manual sales are allowed but must enter the same central records.

**REQUIRED**

## Section N - Delivery, Video Library & Customer Handoff

### N1 - Production vs Delivery

Production complete and customer delivered are separate states.

**REQUIRED**

### N2 - Owner Final Review

Owner reviews final outputs before delivery.

**LOCKED**

### N3 - Standard Outputs

Website, Landscape 16:9, Vertical 9:16, Square 1:1, Email.

**LOCKED**

### N4 - One Social Creative

Three social formats are adaptations of one creative, not three separately sold products.

**LOCKED**

### N5 - Intelligent Reframing

Format conversion must avoid awkward cropping of important content.

**REQUIRED**

### N6 - Per-Format Review

Each required final format receives appropriate review/approval.

**REQUIRED**

### N7 - Clean Filenames

Customer-facing files must be clearly named; internal version clutter is hidden.

**REQUIRED**

### N8 - Video Library

Store client/project/type/format/duration/status/provider/delivery metadata.

**REQUIRED**

### N9 - Downloads

Support individual format and complete package downloads.

**REQUIRED**

### N10 - Customer Ownership

Standard customer owns and can download delivered files.

**LOCKED**

## **N11 - Delivery Record**

Record date, version and formats delivered.

**REQUIRED**

## **N12 - Partial Delivery**

Partial delivery must not appear as complete.

**REQUIRED**

## **N13 - Revision History**

Preserve delivered version traceability and revision history.

**REQUIRED**

## **N14 - No Required Client Account**

Customer should not need an account merely to receive files unless later intentionally designed.

**LOCKED**

## **N15 - Hosting**

Vimeo/hosting is separate from customer ownership.

**LOCKED**

## **N16 - Delivery Recovery**

Failure preserves files and retries safely without duplicate delivery.

**REQUIRED**

## Section O - Follow-Up, Marketing & Repeat Business

### O1 - Delivery Starts Relationship

Standard customer remains active after first project.

**LOCKED**

### O2 - Automatic Thank-You Video

After Standard delivery, create/send BrittVideo-branded Thank-You Follow-Up Video.

**REQUIRED**

### O3 - Thank First

Thank the customer first; demonstrate the product second; no immediate hard sell.

**LOCKED**

### O4 - Marketing Preference

Client-level Active / Paused / Unsubscribed.

**REQUIRED**

### O5 - Easy Unsubscribe

Applicable marketing includes easy opt-out.

NON-NEGOTIABLE

### O6 - Automatic Enforcement

Unsubscribed clients receive no future marketing communications.

NON-NEGOTIABLE

### O7 - Transactional Separate

Necessary service/transactional communications remain separate.

**LOCKED**

### O8 - New Project Does Not Reset

Creating a project cannot reset an unsubscribe.

NON-NEGOTIABLE

### O9 - Useful Marketing

Communications should be relevant/useful, not sent just to fill a cadence.

**LOCKED**

### O10 - AI Suggestions

AI may suggest opportunities; owner chooses Contact/Dismiss/Remind Later.

**LOCKED**

## **O11 - Communication History**

Record what was sent, purpose, date and status.

**REQUIRED**

## **O12 - Quick Video Opportunities**

Thank You, Review Request, Referral Request, Promotion, Announcement, Seasonal, etc.

**REQUIRED**

## **O13 - Demo Case Studies**

Public/demo use of customer work requires appropriate permission.

**REQUIRED**

## **O14 - Duplicate Protection**

Retries/recovery must not duplicate marketing sends.

NON-NEGOTIABLE

## Section P - Premium Quarterly System

### P1 - Premium Price

Default/list price \$997.

**LOCKED**

### P2 - Quarterly Promise

Fresh video every quarter.

**LOCKED**

### P3 - Schedule

Calculate quarterly schedule from actual Premium start date.

**REQUIRED**

### P4 - Advance Warning

Command Center warns before quarterly work is due.

**REQUIRED**

### P5 - Topic Suggestions

AI may suggest topics while avoiding repetition; owner chooses.

**REQUIRED**

### P6 - Reuse Assets

Reuse current approved client assets, while verifying current information.

**REQUIRED**

### P7 - Included Project

Quarterly project is marked Included in Premium.

**REQUIRED**

### P8 - Additional Paid Work

Other requested work may be separately billable.

**LOCKED**

### P9 - Existing Builder

Premium projects use the common Builder/production architecture.

**LOCKED**

### P10 - Delivery Advances Cycle

Next cycle advances only after appropriate delivery completion.

**REQUIRED**

## **P11 - Cancellation**

Cancel anytime; keep files; hosting stops.

**LOCKED**

## **P12 - History**

Cancellation does not erase client/project/payment history.

**LOCKED**

## **P13 - Restart**

Support restart without corrupting history; current pricing/owner decision applies.

**REQUIRED**

## **P14 - Duplicate Protection**

No duplicate quarterly projects or communications.

NON-NEGOTIABLE

## **P15 - Launch Gate**

Do not actively sell the recurring Premium promise until quarterly tracking is tested.

**LOCKED**

# Section Q - Support, Recovery, Backup & System Health

## Q1 - Protect Work First

Automatic protection is a core product requirement.

NON-NEGOTIABLE

## Q2 - Autosave

Meaningful work saves automatically.

**REQUIRED**

## Q3 - Checkpoints

Create recoverable checkpoints at meaningful workflow stages.

**REQUIRED**

## Q4 - Crash Recovery

Provide Restore Last Session or equivalent.

**REQUIRED**

## Q5 - Exact Restore

Return to meaningful work/state, not merely the home screen.

**REQUIRED**

## Q6 - Approval Protection

Recovery preserves valid approvals and never restores invalid approval.

**REQUIRED**

## Q7 - Save Failure

Detect failed saving; do not falsely show Saved & Protected.

**REQUIRED**

## Q8 - Safe Retry

Retry recoverable operations only when safe.

NON-NEGOTIABLE

## Q9 - Duplicate Protection

Never duplicate payment, order, project, communication or delivery due to retry.

NON-NEGOTIABLE

## Q10 - External Verification

Check external status before retrying Square, production or communications.

**REQUIRED**

## Q11 - Plain-Language Errors

Owner sees understandable problem statements, not technical stack traces.

**REQUIRED**

## Q12 - System Health

Monitor saving, storage, backup, production, Square, Vimeo, communications, cloud and sync.

**REQUIRED**

## Q13 - Automatic Recovery

Where safe, recover quietly and report Recovered Automatically.

**REQUIRED**

## Q14 - Get Support

Provide a simple GET SUPPORT action.

NON-NEGOTIABLE

## Q15 - Support Report

Automatically create a plain-language diagnostic report when recovery fails.

NON-NEGOTIABLE

## Q16 - Send for Support

Provide SEND FOR SUPPORT workflow.

NON-NEGOTIABLE

## Q17 - No Secrets

Support report excludes passwords, API secrets, tokens and card data.

**REQUIRED**

## Q18 - App Version

Support report includes the actual BrittVideo application/build version.

**REQUIRED**

## Q19 - One Current App

Normal owner operation does not depend on choosing HTML filenames.

**REQUIRED**

## Q20 - Backup

Sync is not backup. Critical business data needs automatic independent backup/versioning.

NON-NEGOTIABLE

## Q21 - Completed Work

Completed/delivered work receives stronger protection.

**REQUIRED**

## **Q22 - Storage**

Monitor storage; auto-clean only truly temporary files when safe.

**REQUIRED**

## **Q23 - Intentional Deletion**

Restore/sync must not resurrect intentionally permanently deleted assets.

**REQUIRED**

## **Q24 - Unsubscribe Protection**

Recovery/migration must never revert an unsubscribe.

**REQUIRED**

## **Q25 - No Owner Debugging**

Finished system must never require the owner to diagnose console/local-storage/API failures.

NON-NEGOTIABLE

## Section R - Cloud, Central Data & Mac/iPad Architecture

### R1 - Mac Primary

Mac runs the full business and production workflow.

**LOCKED**

### R2 - iPad Focus

iPad primarily runs Demo, Sales, Signup and Payment.

**LOCKED**

### R3 - Cloud Role

Cloud provides central authoritative records, backup support and necessary connectivity.

**REQUIRED**

### R4 - No Full iPad Parity

Do not build full production parity on iPad for launch.

**LOCKED**

### R5 - Central Source of Truth

Clients, prospects, orders, projects, pricing history, payments, approvals, Premium schedule, marketing preferences, communications and metadata use central authoritative records.

**REQUIRED**

### R6 - Media vs Business Data

Large media may live in media/object storage while business metadata remains central.

**REQUIRED**

### R7 - iPad Sale

iPad sale writes central records and appears on Mac without retyping.

**REQUIRED**

### R8 - Demo Library Sync

Approved Demo Library content propagates to iPad/Mac/Demo Link.

**REQUIRED**

### R9 - Demo Isolation

Demo Mode and Demo Links expose only prospect-safe content.

**REQUIRED**

### R10 - Client/Project Central

Client and project records are durable and central.

**REQUIRED**

## **R11 - Approval Central**

Approval ledger becomes durable/persistent central project state.

**REQUIRED**

## **R12 - Pricing Central**

Historical pricing is preserved and immutable.

**REQUIRED**

## **R13 - Opt-Out Central**

Marketing opt-out is client-level and immediately suppresses applicable marketing.

**REQUIRED**

## **R14 - Premium Central**

Premium schedule/history is central.

**REQUIRED**

## **R15 - Payment Central**

Square payment status/reference is central.

**REQUIRED**

## **R16 - Deletion Sync**

Deleted/Do Not Use state synchronizes and is not resurrected.

**REQUIRED**

## **R17 - Conflict Reduction**

Mac-primary architecture intentionally avoids simultaneous full-edit conflict complexity.

**LOCKED**

## **R18 - Sync vs Backup**

Synchronization is not backup.

**LOCKED**

## **R19 - Interrupted Sync**

Protect local work, queue/retry safely and prevent duplicate records.

**REQUIRED**

## **R20 - Authentication**

Administrative access requires simple secure authentication.

**REQUIRED**

## **R21 - Migration**

Move from local Builder to central architecture without redesigning the workflow from scratch.

**LOCKED**

## **R22 - Migration Test**

Test migration before cutover; do not require owner to manually migrate hundreds of records.

**REQUIRED**

## **R23 - Device Loss**

Loss of an iPad or Mac must not equal loss of central business records.

**REQUIRED**

## **R24 - Cloud Outage**

Do not falsely report saved/synced when cloud protection is unavailable.

**REQUIRED**

## **R25 - Support Visibility**

Support reports include sync/central-data health.

**REQUIRED**

## Section S - Integrations & External Services

### S1 - One Business Interface

Owner primarily operates BrittVideo; outside services remain underneath.

**REQUIRED**

### S2 - Integration Test

Add integrations only when they reduce work/improve experience and can fail safely.

**REQUIRED**

### S3 - Square

Secure payment processing; BrittVideo controls pricing.

**REQUIRED**

### S4 - Video Production

External provider renders approved content; BrittVideo owns workflow and records.

**REQUIRED**

### S5 - No Silent Rewrite

Provider may not silently rewrite approved customer content.

**REQUIRED**

### S6 - Production Job Tracking

Track Ready, Submitted, Processing, Ready for Review, Approved and Delivered.

**REQUIRED**

### S7 - Provider Failure

Failure protects approved project and allows safe retry.

**REQUIRED**

### S8 - Website Analysis

Analyze public website content with owner review and fallback when analysis fails.

**REQUIRED**

### S9 - Communications

Support customer confirmation, delivery, Thank-You, Premium planning and marketing.

**REQUIRED**

### S10 - Unsubscribe

Communication system enforces marketing opt-out.

**REQUIRED**

## **S11 - Vimeo**

Planned hosting/playback integration; Vimeo is not the owner-facing Video Library.

**REQUIRED**

## **S12 - Cloud**

Central data provider is technical infrastructure, not an owner dashboard.

**REQUIRED**

## **S13 - Zoom**

Initial remote sales can use normal Zoom + BrittVideo Demo Mode; deep Zoom API integration is not required.

**REQUIRED**

## **S14 - LiveAvatar**

Future capability, not core launch blocker.

**REQUIRED**

## **S15 - Integration Settings**

Settings -> Integrations shows simple Connected / Needs Attention states.

**REQUIRED**

## **S16 - Credential Protection**

API/payment/media credentials are protected and never exposed in Demo Mode/links/support reports.

**REQUIRED**

## **S17 - Failure Isolation**

Failure of one service should not unnecessarily stop unrelated BrittVideo work.

**REQUIRED**

## **S18 - Launch Tiers**

Core production/data first; sales/delivery next; enhancements later; future interactive features last.

**REQUIRED**

## **S19 - Cost Control**

External service cost and maintenance burden matter for a one-person business.

**REQUIRED**

## Section T - Image Library, Storage & Cleanup

### T1 - One Image Library

Owner works through BrittVideo Image Library rather than manual folder hunting.

**REQUIRED**

### T2 - Asset Metadata

Associate images with client/project/source/usage/status.

**REQUIRED**

### T3 - States

Available, Approved, Do Not Use, Deleted/Recently Deleted, Protected/In Use as applicable.

**REQUIRED**

### T4 - Do Not Use Enforcement

AI never recommends Do Not Use assets unless owner changes the state.

NON-NEGOTIABLE

### T5 - Delete Controls

Provide DELETE IMAGE and DELETE SELECTED.

**REQUIRED**

### T6 - In-Use Protection

Warn before deleting an asset used by an active/completed project.

**REQUIRED**

### T7 - Owner Authority

Protection warns against accidents; owner retains intentional final control.

**REQUIRED**

### T8 - Unused/Duplicates

Identify unused images and likely duplicates for review.

**REQUIRED**

### T9 - No Automatic Duplicate Deletion

Suspected duplicates are owner-reviewed unless provably temporary.

**REQUIRED**

### T10 - Outdated Assets

Flag likely outdated logos/people/services for review, not automatic deletion.

**REQUIRED**

## **T11 - Replace Asset**

Support replacement while preserving historical delivered project truth.

**REQUIRED**

## **T12 - Storage Cleanup**

Provide Storage Cleanup with safe candidates and explanations.

**REQUIRED**

## **T13 - Recently Deleted**

Support restore and permanent delete where implemented.

**REQUIRED**

## **T14 - Deleted Means Deleted**

Permanent deletion is not resurrected by sync/restore and is excluded from AI.

NON-NEGOTIABLE

## **T15 - Protection Classes**

Distinguish Temporary, Working, Master and Delivered assets.

**REQUIRED**

## **T16 - Format Labels**

Clearly label Website, Landscape 16:9, Vertical 9:16, Square 1:1 and Email.

**REQUIRED**

## **T17 - Temporary Production Files**

Identify and eventually auto-clean only safe temporary files.

**REQUIRED**

## **T18 - Provider Switching**

Provider changes never delete BrittVideo core assets or delivered masters.

**REQUIRED**

## **T19 - Development Files**

Separate Current BrittVideo from Development Archive; do not blindly mass-delete old HTML/screenshots until authoritative build and backup are protected.

**REQUIRED**

## **T20 - Storage Health**

Command Center shows Storage Healthy or Storage Cleanup Available when useful.

**REQUIRED**

## **T21 - Low Storage**

Never falsely report Saved & Protected if storage threatens saving.

NON-NEGOTIABLE

## Section U - AI Provider Independence & Production Switching

This section is a core architectural requirement: BrittVideo must be able to switch among supported AI video platforms without rebuilding the application or losing project work.

### U1 - No Provider Lock-In

BrittVideo is never permanently tied to one AI video provider.

NON-NEGOTIABLE

### U2 - Production Layer

Builder/Quick Video/Premium feed one BrittVideo Production Layer.

**REQUIRED**

### U3 - Provider Adapters

Each supported platform has an adapter translating common BrittVideo production requests.

**REQUIRED**

### U4 - Owner Selection

Settings -> Video Production allows the Super User to select Primary and Backup providers.

**REQUIRED**

### U5 - No Programming for Supported Switch

Switching among already-supported providers does not require source-code editing.

NON-NEGOTIABLE

### U6 - Protected Credentials

Each provider connection uses protected credentials.

**REQUIRED**

### U7 - Provider-Independent Project

Client, story, script, narration, scene plan, images, approvals, duration, formats and history belong to BrittVideo.

NON-NEGOTIABLE

### U8 - Approval Before Submission

Only approved content is submitted to production.

**REQUIRED**

### U9 - No Silent Rewrite

Provider cannot rewrite approved script without returning to approval.

NON-NEGOTIABLE

## U10 - Capability Profile

Record provider capabilities: duration, formats, avatar, voice, media, resolution, captions and relevant features.

**REQUIRED**

## U11 - Compatibility Check

Check project compatibility before production or provider switch.

**REQUIRED**

## U12 - Plain-Language Incompatibility

Explain required replacement/adjustment without breaking the project.

**REQUIRED**

## U13 - Standard Obligations

Provider architecture must still fulfill Website, 16:9, 9:16, 1:1 and Email obligations.

**REQUIRED**

## U14 - Provider-Specific Assets

Mark provider-specific avatar, voice, template or feature.

**REQUIRED**

## U15 - Replacement Flow

If switching makes an avatar/voice unavailable, request replacement while preserving the rest of the project.

**REQUIRED**

## U16 - New Projects

Global provider change affects new projects by default.

**REQUIRED**

## U17 - Existing Projects

Existing projects do not silently switch when global primary provider changes.

**REQUIRED**

## U18 - Existing Project Switch

Allow Change Video Provider with compatibility check and owner approval.

**REQUIRED**

## U19 - Completed Projects

Never rebuild or alter completed delivered projects merely because provider changed.

NON-NEGOTIABLE

## U20 - Old Project Reproduction

Preserve enough BrittVideo data to reproduce/update old work with a new provider if the original provider disappears.

**REQUIRED**

## **U21 - Backup Provider**

When primary provider is unavailable, offer Use Backup Video Platform after compatibility check.

**REQUIRED**

## **U22 - No Blind Automatic Failover**

Material provider switching normally requires owner approval because output may look different.

**REQUIRED**

## **U23 - Test Render**

Support short test render when evaluating a new provider.

**REQUIRED**

## **U24 - Cost**

Cost may be tracked, but BrittVideo does not automatically choose the cheapest provider.

**REQUIRED**

## **U25 - Provider History**

Record internally which provider/model produced a video.

**REQUIRED**

## **U26 - Provider Deprecation**

Architecture assumes models/voices/avatars/features can be retired.

**REQUIRED**

## **U27 - Disconnect**

Allow provider disconnection without deleting BrittVideo history; warn if active projects depend on it.

**REQUIRED**

## **U28 - Provider Health**

System Health monitors primary/backup connections.

**REQUIRED**

## **U29 - New Provider**

A brand-new unsupported platform may require developer adapter work, but not a BrittVideo rewrite.

**REQUIRED**

## **U30 - Certification Test**

Before a provider is Approved for Production, test connection, script, scenes, voice/avatar, formats, duration, status, download and error recovery.

**REQUIRED**

## **U31 - Test Project**

Maintain a provider test project separate from real customer work.

**REQUIRED**

## **U32 - AI Authority**

AI can identify compatibility but cannot independently move paid customer work to another provider.

**REQUIRED**

## **U33 - Price Independence**

Provider switch never automatically changes the customer's agreed price.

**REQUIRED**

## **U34 - All Products**

Standard, Premium and Quick Videos share the same provider-independent architecture.

**REQUIRED**

## **U35 - Emergency Continuity**

If a provider shuts down, customers/projects/scripts/scenes/images/approvals/completed videos/history remain.

NON-NEGOTIABLE

## **U36 - Verification**

Multi-provider readiness is proven only after the same BrittVideo test project can be produced through at least two supported providers without rebuilding the app.

**REQUIRED**

## Section V - Security, Privacy & Owner Controls

### V1 - Separate Accounts

Every administrative person uses their own login. No shared owner/developer password.

NON-NEGOTIABLE

### V2 - Roles

Required roles: Super User, Admin and User.

NON-NEGOTIABLE

### V3 - Super User

Highest authority. Initially the owner is Super User.

**REQUIRED**

### V4 - Admin

Trusted administrative/developer access with substantial but not necessarily unrestricted authority.

**REQUIRED**

### V5 - User

Limited operational access; no automatic access to sensitive settings.

**REQUIRED**

### V6 - Developer Login

Developer receives a separate account, normally Admin when appropriate.

**REQUIRED**

### V7 - Role Changes

Super User can promote, downgrade and disable users.

**REQUIRED**

### V8 - Disable User

Disabling access preserves historical activity/audit records.

**REQUIRED**

### V9 - Last Super User

System prevents accidental deletion/demotion of the last active Super User.

NON-NEGOTIABLE

### V10 - Audit Trail

Important changes record who, what and when.

**REQUIRED**

### V11 - Temporary Access

Time-limited elevated developer access is highly desirable.

**REQUIRED**

## **V12 - Demo/Prospect**

Demo viewers are not administrative users.

**REQUIRED**

## **V13 - Demo Isolation**

Demo Mode hides clients, prospects, revenue, deal history, private notes, support logs and credentials.

NON-NEGOTIABLE

## **V14 - Lost Device**

Lost/stolen iPad must not expose the complete business database; central access can be revoked.

**REQUIRED**

## **V15 - Demo Link Security**

Link cannot be manipulated to reveal other clients/admin data; owner can disable/expire it.

**REQUIRED**

## **V16 - Data Minimization**

Collect only customer information BrittVideo actually needs.

**REQUIRED**

## **V17 - Payment Data**

BrittVideo does not store full card number or CVV; Square handles sensitive payment processing.

NON-NEGOTIABLE

## **V18 - API Secrets**

Secrets/tokens never live in public/prospect-facing HTML or support reports.

NON-NEGOTIABLE

## **V19 - Protected Backend**

Sensitive service calls use an appropriate protected backend/integration layer.

**REQUIRED**

## **V20 - Support Logs**

Logs contain enough diagnostic context without unnecessary secrets/customer content.

**REQUIRED**

## **V21 - Backup Security**

Backups themselves are protected.

**REQUIRED**

## V22 - Marketing Preference

Unsubscribe state is protected across restore/migration/sync/new projects.

NON-NEGOTIABLE

## V23 - Demo Permission

Client approval of their own video does not automatically grant public demo permission.

**REQUIRED**

## V24 - AI Data Scope

AI/video providers receive only the data needed for the task.

**REQUIRED**

## V25 - Download/Hosting Access

Customer links cannot expose other clients' files.

**REQUIRED**

## V26 - Critical Change Confirmation

Use confirmation for destructive/global actions without confirmation overload.

**REQUIRED**

## V27 - Global Price Change

Explain that future default changes do not alter historical sales.

**REQUIRED**

## V28 - Provider Change Confirmation

Explain effect on new vs existing projects before changing global primary provider.

**REQUIRED**

## V29 - Test vs Live

Development/test and live environments are separated.

**REQUIRED**

## V30 - Test Safety

Test mode cannot charge real cards, email real clients or publish real demos.

**REQUIRED**

## V31 - Plain-Language Security

Security errors use owner-friendly instructions such as Reconnect, not technical token debugging.

**REQUIRED**

## Section W - Testing, Quality Control & Launch Gates

### W1 - Evidence-Based Status

Code written is not verified. Verification requires successful workflow testing.

ACCEPTANCE TEST

### W2 - Owner Workflow

Test BrittVideo the way the owner actually uses it.

ACCEPTANCE TEST

### W3 - Exact Button Names

Testing instructions use the exact visible control name.

ACCEPTANCE TEST

### W4 - One Step at a Time

Hands-on owner testing proceeds one action at a time.

ACCEPTANCE TEST

### W5 - Builder Gate

Prove Client -> Website -> Images -> Story -> Scripts -> Scenes -> Approvals -> Complete Kit -> Production.

ACCEPTANCE TEST

### W6 - False Completion

Leave one approval missing; Complete Video Kit Approved must not appear.

ACCEPTANCE TEST

### W7 - Material Change

Edit approved content; affected approval must invalidate.

ACCEPTANCE TEST

### W8 - Persistence

Save/close/reopen/restore must preserve correct state.

ACCEPTANCE TEST

### W9 - Quick Video

Test 15/30/60/90/120 and complete purpose-to-delivery flow.

ACCEPTANCE TEST

### W10 - Standalone Email

Test Email Video by itself.

ACCEPTANCE TEST

## **W11 - Standard Package**

Test Website + 16:9 + 9:16 + 1:1 + Email end-to-end.

ACCEPTANCE TEST

## **W12 - Provider Gate**

Primary provider successfully produces a BrittVideo test project.

ACCEPTANCE TEST

## **W13 - Provider Switching Gate**

Produce through Provider A, switch, compatibility-check and produce through Provider B.

ACCEPTANCE TEST

## **W14 - No Rebuild**

Provider switch does not erase BrittVideo project data.

ACCEPTANCE TEST

## **W15 - Backup Provider**

Simulate primary provider outage and compatible backup workflow.

ACCEPTANCE TEST

## **W16 - Delivery Gate**

Final review -> approve -> deliver -> record correct files/access.

ACCEPTANCE TEST

## **W17 - Marketing Gate**

Unsubscribe suppresses marketing; service messages remain appropriately separate.

ACCEPTANCE TEST

## **W18 - Premium Gate**

Sale -> schedule -> quarterly project -> delivery -> next cycle -> cancellation -> restart.

ACCEPTANCE TEST

## **W19 - Command Center Gate**

Owner understands daily status within seconds.

ACCEPTANCE TEST

## **W20 - Sales Gate**

Prospect -> Demo -> Become Client -> Package -> Price -> Agreement -> Payment -> Client/Order/Project.

ACCEPTANCE TEST

## **W21 - Pricing Gate**

Verify list vs agreed/sold price and historical immutability.

ACCEPTANCE TEST

## **W22 - Square Gate**

Test success, decline, interruption, retry and no duplicate charge.

ACCEPTANCE TEST

## **W23 - iPad Gate**

iPad sale appears on Mac as New Client - Ready to Start with no retyping.

ACCEPTANCE TEST

## **W24 - Remote Gate**

Mac + Zoom + Demo Mode + secure payment link + project creation.

ACCEPTANCE TEST

## **W25 - Demo Link Attack Test**

Attempt unauthorized link manipulation; access must be denied.

ACCEPTANCE TEST

## **W26 - Role Gate**

Test Super User/Admin/User permissions and separate developer login.

ACCEPTANCE TEST

## **W27 - Permission Enforcement**

Direct unauthorized requests are blocked, not merely hidden in UI.

ACCEPTANCE TEST

## **W28 - Developer Disable**

Disabling developer account removes access while preserving audit history.

ACCEPTANCE TEST

## **W29 - Support Gate**

Recoverable failure recovers safely; unrecoverable failure creates Support Needed -> Get Support -> Send for Support.

ACCEPTANCE TEST

## **W30 - Backup Gate**

Verify a backup can actually be restored.

ACCEPTANCE TEST

## **W31 - Sync Conflict**

No duplicate client/lost project/reverted unsubscribe/corrupted price after interrupted sync.

ACCEPTANCE TEST

## **W32 - Controlled Standard Customer**

Safely complete at least one customer from build through delivery.

ACCEPTANCE TEST

## **W33 - Full Launch**

Broad launch requires business systems, recovery, roles, central data, provider switching and support to pass applicable gates.

ACCEPTANCE TEST

## **W34 - Owner Acceptance**

Final acceptance: owner can operate BrittVideo without developer assistance for normal workflow.

ACCEPTANCE TEST

## Section X - Launch Stages & Build Priority

| Stage | Objective                                     | Key Exit Condition                                                                           |
|-------|-----------------------------------------------|----------------------------------------------------------------------------------------------|
| 1     | Finish & stabilize current Builder            | Core workflow and approvals stable; save/restore and required formats sufficiently reliable. |
| 2     | First controlled Standard customer            | Customer -> Build -> Approve -> Produce -> Deliver without lost work or owner debugging.     |
| 3     | Command Center + core business system         | Central clients/projects, roles, audit, recovery and one current BrittVideo.                 |
| 4     | Sales + iPad + Square                         | Prospect converts to paid client through iPad/remote/Demo Link without duplicate/re-entry.   |
| 5     | Follow-Up + repeat business                   | Thank-You, communication history, useful marketing and enforced opt-out.                     |
| 6     | Premium quarterly system                      | Quarterly scheduling, included work, delivery, cancellation and restart tested.              |
| 7     | Full provider switching + advanced automation | At least two providers proven through the provider-independent production layer.             |

### Build Priority Rule

- 1. Protect customer work.
- 2. Correct workflow.
- 3. Production.
- 4. Delivery.
- 5. Recovery.
- 6. Customer/business records.
- 7. Sales automation.
- 8. Repeat business.
- 9. Premium automation.
- 10. Advanced features.

**Bugs that break workflow outrank new features. Cosmetic issues can wait unless they confuse the owner or customer.**

## Section Y - Developer Build Specification & Handoff

### Y1 - Existing Builder

Current Builder is the starting point; do not casually rebuild from scratch.

DEVELOPER REQUIREMENT

### Y2 - Master Requirements Win

When old code conflicts with a newer locked requirement, this specification controls.

DEVELOPER REQUIREMENT

### Y3 - Modular Architecture

Use logical modules: Auth/Users, Prospects, Clients, Sales/Orders, Pricing, Builder, Assets, Approvals, Production, Video Library, Delivery, Quick Videos, Premium, Communications, Marketing, Demo/Sales, Payments, Integrations, Support/Recovery, System Health.

DEVELOPER REQUIREMENT

### Y4 - Durable IDs

Clients/projects/orders/assets use durable identifiers; business name alone is not identity.

DEVELOPER REQUIREMENT

### Y5 - Approval Data

Approval is stored state tied to content/version, not merely a green visual border.

DEVELOPER REQUIREMENT

### Y6 - Calculated Complete Gate

Complete Video Kit Approved is calculated from required valid approvals.

DEVELOPER REQUIREMENT

### Y7 - Production Layer

Provider-specific API calls are isolated behind provider adapters.

DEVELOPER REQUIREMENT

### Y8 - Common Production Request

Internal request includes script, scenes, assets, duration, format, voice/avatar requirements.

DEVELOPER REQUIREMENT

### Y9 - Production Jobs

Store provider, external job reference, status, submitted/completed/failure information.

DEVELOPER REQUIREMENT

### Y10 - Asset Metadata

Do not rely solely on filenames; track state, client/project, source and usage.

#### DEVELOPER REQUIREMENT

### **Y11 - Delivery Records**

Store deliverable/version/format/date/status.

#### DEVELOPER REQUIREMENT

### **Y12 - Marketing Preference**

Client-level state is enforceable system data.

#### DEVELOPER REQUIREMENT

### **Y13 - Premium Record**

Store start/status/next quarter/cancellation/history.

#### DEVELOPER REQUIREMENT

### **Y14 - Payment Adapter**

Square is isolated behind payment integration with idempotency.

#### DEVELOPER REQUIREMENT

### **Y15 - Demo Data Boundary**

Do not load the whole admin app and merely hide sensitive sections.

#### DEVELOPER REQUIREMENT

### **Y16 - Central Datastore**

Authoritative business records live in persistent central storage.

#### DEVELOPER REQUIREMENT

### **Y17 - Media Storage**

Large media uses appropriate storage while metadata remains central.

#### DEVELOPER REQUIREMENT

### **Y18 - Recovery**

Autosave/checkpoints/crash recovery are product features, not owner habits.

#### DEVELOPER REQUIREMENT

### **Y19 - System Health**

Monitor critical subsystems and expose simple owner-facing states.

#### DEVELOPER REQUIREMENT

### **Y20 - Support Package**

Include app version, affected area, recent diagnostics, integration state and recovery attempts without secrets.

#### DEVELOPER REQUIREMENT

### **Y21 - Environment Separation**

Development/test is separated from live.

DEVELOPER REQUIREMENT

## Y22 - Migration

Document/test migration from local Builder; preserve data/workflow and support rollback.

DEVELOPER REQUIREMENT

## Y23 - Updates

Updates cannot wipe clients, projects, approvals, prices, opt-outs or Premium schedules.

DEVELOPER REQUIREMENT

## Y24 - Developer Cannot Simplify Away

Human approval, provider independence, recovery, role security, historical pricing, opt-out enforcement, approval integrity and duplicate protection are mandatory.

DEVELOPER REQUIREMENT

## Y25 - Technical Freedom

Developer may choose framework/database/deployment/testing tools if they satisfy these product requirements.

DEVELOPER REQUIREMENT

## Y26 - Success Standard

Build BrittVideo so the owner can run the business without becoming the software technician.

DEVELOPER REQUIREMENT

## Developer 'Do Not Simplify Away' List

| Requirement               | Why it cannot be simplified away                                                         |
|---------------------------|------------------------------------------------------------------------------------------|
| Human approval            | Customer-facing content must not bypass owner review/approval.                           |
| Provider independence     | BrittVideo must be able to change supported AI video platforms without app rewrite.      |
| Separate developer login  | Owner credentials are never shared; developer access is independently controllable.      |
| Super User / Admin / User | Permissions must be enforced server-side/at the service boundary, not only hidden in UI. |
| Historical pricing        | Future default changes must not rewrite past sales.                                      |
| Marketing opt-out         | Unsubscribe is enforceable state, not a note.                                            |
| Approval integrity        | Visual green state alone is not approval truth.                                          |
| Recovery                  | 'Remember to save' is not a recovery system.                                             |
| Duplicate protection      | Retries cannot duplicate payments, jobs, messages, projects or deliveries.               |

# Section Z - Master Completion Map & Immediate Next Work

## Practical Priority Groups

| Group                  | Meaning                                                                            |
|------------------------|------------------------------------------------------------------------------------|
| GREEN - VERIFIED       | Tested successfully.                                                               |
| RED - MUST FINISH      | Blocks safe customer operation or a promised feature.                              |
| YELLOW - REQUIRED NEXT | Part of finished BrittVideo but may follow the first controlled Standard customer. |
| BLUE - FUTURE          | Deliberately deferred.                                                             |

## Current Position

- Builder: substantial foundation; active testing/fixes remain.
- First controlled Standard customer: getting closer, but approval integrity, work protection, complete production and delivery still need verification.
- Complete business system: comprehensively designed; major portions still require development.
- Full BrittVideo: A-Z requirements are now mapped; implementation must proceed in stages.

## Immediate Builder Test Sequence

- 1. Verify Complete Video Kit Approved against real underlying approvals.
- 2. False-approval test with one required approval missing.
- 3. Material-change invalidation test.
- 4. Save/close/reopen approval persistence.
- 5. Quick Video persistence.
- 6. Quick Video 15/30/60/90/120 durations.
- 7. Standalone Email Video.
- 8. Standard formats: Website, 16:9, 9:16, 1:1, Email.
- 9. Production/download/delivery verification.

## Four Readiness Measures

| Measure                           | What it answers                                                        |
|-----------------------------------|------------------------------------------------------------------------|
| Builder Readiness                 | How close is the actual video Builder to reliable operation?           |
| First Standard Customer Readiness | Can one controlled paying Standard customer be handled safely?         |
| Business System Readiness         | How much of the complete one-person operating system exists?           |
| Full BrittVideo Readiness         | How much of the complete A-Z vision has been implemented and verified? |

## Appendix A - Locked Product & Business Rules

| Area                  | Locked Rule                                                                 |
|-----------------------|-----------------------------------------------------------------------------|
| Standard              | Default/list price \$597.                                                   |
| Premium               | Default/list price \$997.                                                   |
| Standard Website      | Up to 120 seconds.                                                          |
| Standard Social       | Landscape 16:9 + Vertical 9:16 + Square 1:1.                                |
| Email                 | Separate Email Video; can also be standalone.                               |
| Ownership             | Standard customer owns/downloads delivered files.                           |
| Quick Video           | 15/30/60/90/120 seconds; multiple purposes; owner-controlled price.         |
| Pricing               | Owner can override individual deal; historical sale prices never rewritten. |
| AI Pricing            | AI cannot independently discount or commit price.                           |
| Premium               | Fresh video every quarter; cancel anytime; keep files; hosting stops.       |
| Human Approval        | Required before production.                                                 |
| Provider Independence | Supported AI video platforms must be switchable through adapters.           |
| Roles                 | Super User / Admin / User; separate developer login.                        |
| Mac                   | Primary production/admin workstation.                                       |
| iPad                  | Demo + Sales + Signup + Payment.                                            |
| Marketing             | Easy unsubscribe; automatic enforcement; service messages separate.         |
| Recovery              | Owner never diagnoses software failures.                                    |

## Appendix B - Core Data Entities

| Entity         | Minimum Important Data / Relationships                                                             |
|----------------|----------------------------------------------------------------------------------------------------|
| User           | Identity, role, status, audit identity, access state.                                              |
| Prospect       | Business/contact/website/industry/business type/status/demo activity as appropriate.               |
| Client         | Durable ID, business/contact data, marketing preference, relationship history.                     |
| Order          | Client, package, list price at sale, quoted/agreed, actual sold, payment state/reference, date.    |
| Project        | Client/order/type/package/status/source/story/scripts/scenes/assets/approvals/production/delivery. |
| Approval       | Item, content/version, state, approver, timestamp.                                                 |
| Asset          | Client/project/source/type/status/usage/protection/deletion state/storage pointer.                 |
| Production Job | Project/provider/model/external job ID/status/timestamps/failure/retry data.                       |
| Deliverable    | Project/type/format/version/file or hosting pointer/review/delivery state.                         |
| Communication  | Client/type/purpose/date/status/marketing vs transactional/idempotency reference.                  |
| Premium        | Client/start/status/next due/cancellation/history.                                                 |
| Demo Item      | Approved asset/video, industry/business type/type/purpose/duration/format/permission state.        |
| Integration    | Provider/type/connection status/health/credential reference (secret not exposed).                  |
| Audit Event    | User/action/time/object/meaningful before-after context for critical changes.                      |

## Appendix C - Required Owner-Facing Screens / Areas

- Login / authentication
- Command Center
- Prospects
- Clients
- Client history
- Builder
- Website analysis
- Image Library
- Story / scripts / narration / scenes
- Approval ledger / Complete Video Kit gate
- Production status
- Video Library
- Delivery
- Quick Video creation
- Premium management
- Demo Mode
- Demo Library
- Become a Client / Signup / Agreement / Payment
- Settings -> Pricing
- Settings -> Users
- Settings -> Integrations
- Settings -> Video Production (Primary/Backup provider)
- Marketing preferences / communication history
- Storage Cleanup / Recently Deleted
- System Health
- Get Support / Send for Support

## Appendix D - Role Model (Initial)

| Capability                             | Super User            | Admin                      | User            |
|----------------------------------------|-----------------------|----------------------------|-----------------|
| Normal client/project work             | Yes                   | Yes, if granted            | Yes, if granted |
| Manage users/roles                     | Yes                   | Limited/no by default      | No              |
| Disable developer/user                 | Yes                   | No by default              | No              |
| Change global pricing                  | Yes                   | No by default              | No              |
| Change primary AI provider             | Yes                   | Only if explicitly granted | No              |
| Manage integrations/credentials        | Yes                   | Only if explicitly granted | No              |
| View sensitive revenue/pricing history | Yes                   | As granted                 | No by default   |
| Support diagnostics                    | Yes                   | Yes as granted             | Limited         |
| Permanent destructive actions          | Yes with confirmation | Restricted                 | No              |

**Important: exact Admin/User permission granularity may be refined during implementation, but Super User authority, separate accounts, real permission enforcement and owner-controlled disable/downgrade are mandatory.**

## Appendix E - Provider Adapter Contract (Functional)

- Connect / disconnect provider securely.
- Report connection and health state.
- Expose capability profile.
- Accept a common BrittVideo production request.
- Validate compatibility before submission.
- Translate BrittVideo request to provider-specific API calls.
- Submit job with idempotency / duplicate protection.
- Poll or receive production status.
- Retrieve output/reference safely.
- Map provider failures into plain-language BrittVideo states.
- Support safe retry after checking existing external job state.
- Record provider/model/job reference internally.
- Never alter BrittVideo project data merely because the provider changes.

**A new AI video platform should be added by implementing this adapter contract and passing the provider certification tests - not by rewriting the Builder, Quick Video or Premium modules.**

## Appendix F - Launch-Critical Acceptance Checklist

| Gate                  | Required Result                                                                                 |
|-----------------------|-------------------------------------------------------------------------------------------------|
| Approval integrity    | Valid approvals only; false completion impossible; material edits invalidate affected approval. |
| Work protection       | Autosave/checkpoints/recovery protect paying customer work.                                     |
| Production            | Approved project produces usable required outputs.                                              |
| Standard formats      | Website + 16:9 + 9:16 + 1:1 + Email verified.                                                   |
| Delivery              | Correct customer files delivered and recorded.                                                  |
| Payment security      | If integrated, secure payment and duplicate-charge protection verified.                         |
| Role security         | Separate developer login; Super User/Admin/User enforcement works.                              |
| Central records       | Client/order/project history survives restart/device changes as applicable.                     |
| Support               | Recoverable failure recovers; unrecoverable failure produces usable support report.             |
| Backup                | A real restore test succeeds.                                                                   |
| Provider architecture | Production code is not hard-wired throughout the app to one provider.                           |

## Appendix G - Developer Delivery Expectations

- Source code and build/deployment instructions appropriate to the chosen architecture.
- Database/schema migrations and rollback strategy.
- Environment configuration for development/test/live without exposing secrets.
- Automated tests for critical business rules and permission boundaries where practical.
- Provider adapter documentation and certification procedure.
- Square/payment idempotency and retry design documentation.
- Backup/restore procedure tested in practice.
- Support report schema and diagnostic logging rules.
- Migration plan from the current local Builder.
- Release notes/change history for requirements-affecting changes.
- A final owner acceptance session using normal BrittVideo workflows.

**Final handoff principle: the developer may choose sound technical implementation details, but may not silently remove or weaken the locked BrittVideo business, security, approval, recovery, pricing, opt-out or provider-independence requirements in this specification.**

# BRITTVIDEO BUILD STANDARD

**BrittVideo diagnoses the problem. The owner runs the business.**

The application is ready when the defined workflows are reliable, recoverable, secure and understandable to the owner - not merely when the code compiles or individual screens exist.

End of Master Developer Build Specification
